

# Eliška

is a little girl who suffers from a genetic disease SMA type 1-2.

She likes to laugh, paint, swim and play with animals.

At 13 months she obtained her first treatment spinrase followed by Zolgensma gene therapy.

As this disease left her with its consequences and Eliška can't even sit herself yet, so for every improvement and strengthening requires daily exercise and rehabilitation with compensatory aids, which are often not covered by insurance.

Please help Eliška on her way to a better future and improving the quality of life.

Thank you very much

You can support Eliška by sending any financial amount to achieve better professional and quality care.
